Romeo + Juliet Diabetes Management System

Diabetes Management System

Recognized with the iF product design award 1990 - Best Of Category

Diabetes Management System (telemedicine) consisting of an electronic diary with a measuring facility for blood sugar levels and the ability to record insulin, diet, exercise, sick days and hypoglycemic data. Each patient device is programmed with individually tailored daily therapeutic plans that are able to prompt the patient. Data interface with optional printer transfers the information to clinic software that graphically highlights problematic trends. Additionally patient software for home management is provided.
